TECHNICAL OPERATIONS GUIDE

Vanguard Systems Service Desk Runbook

Document ID: VNG-RUNBOOK-2026
Version: 3.2.0

> **Overview:** This 3-page operational runbook outlines standard operating procedures, device management policies, network configuration rules, and incident resolution protocols for **Vanguard Systems Ltd.**

1. New Employee Hardware Provisioning

All newly hired staff at Vanguard Systems Ltd. receive a standard corporate hardware bundle configured with BitLocker drive encryption, predefined security certificates, and Endpoint Protection.

Standard Laptop Specs & Profiles

- **Engineering Profile:** ThinkPad P1 Gen 6 | 64GB RAM | 2TB NVMe SSD | Ubuntu/Windows Dual-Boot
- **Business Operations Profile:** Dell Latitude 7440 | 16GB RAM | 512GB SSD | Windows 11 Enterprise
- **Design Profile:** Apple MacBook Pro 16" (M3 Max) | 36GB RAM | 1TB SSD | macOS Sonoma

2. Vanguard Systems Zero-Trust Access Protocol

Vanguard Systems enforces a strict Zero-Trust Network Architecture (ZTNA). Every user request is authenticated, authorized, and encrypted before access is granted to internal infrastructure.

Resource Name	Gateway Address	Auth Method Required
Internal Jira & Confluence	`wiki.vanguard-sys.internal`	Okta SSO + YubiKey FIDO2
Staging Kubernetes Clusters	`k8s-stage.vanguard-sys.net`	Boundary Zero-Trust Tunnel
Production Database Proxies	`db-prod.vanguard-sys.net`	Just-In-Time (JIT) Teleport Key

SECTION 2

Troubleshooting & Self-Service Procedures

Target Audience: All Vanguard Employees

3. Vanguard Secure Gateway VPN Troubleshooting

If you experience connection failures with the Vanguard GlobalConnect VPN client, perform the following verification steps prior to opening an IT Helpdesk ticket.

1. **Verify Wi-Fi DNS Settings:** Ensure your network adapter is configured to obtain DNS automatically. Fixed custom DNS (such as 8.8.8.8) blocks internal resolution.
2. **Clear Cached Credentials:** Open the Vanguard GlobalConnect client → Settings → Advanced → Click *"Flush Identity Cache"*.
3. **Re-authenticate Okta Token:** Open your mobile authenticator app, force a sync update, and re-enter your 6-digit TOTP code.

4. Password Reset & Account Lockout Policy

To self-service a locked Vanguard domain account, visit the secure password portal at `https://reset.vanguard-sys.com` from any browser or mobile device.

> **Lockout Rules:** Account lockouts trigger automatically after 5 consecutive failed login attempts. Accounts remain locked for 15 minutes unless manually unlocked via the self-service portal or by contacting the Vanguard Helpdesk at extension **8800**.

5. Authorized Software Request Procedure

Installing software outside the Vanguard Managed Application Hub requires explicit manager sign-off and security vetting.

- Submit a request ticket via `helpdesk.vanguard-sys.com` under *"Software Procurement"*.
- All requested tools undergo an automated vulnerability scan and license assessment within 48 hours.

SECTION 3

Support Escalation & Service Matrix

Classification: Internal Use Only

6. Helpdesk SLA & Support Escalation Matrix

Support issues are prioritized based on operational urgency and employee impact. The matrix below defines standard resolution timeframes.

Priority	Category	First Response SLA	Resolution Target
P1 - Critical	Company-wide network or email outage	15 minutes	2 hours
P2 - High	Single department unable to access core tools	1 hour	4 hours
P3 - Medium	Individual laptop issue, peripheral failure	4 hours	24 hours
P4 - Low	New software requests, minor inquiries	12 hours	72 hours

7. Primary IT Contact Directory

Vanguard IT Helpdesk: `support@vanguard-sys.com` | Ext. 8800
Cybersecurity Ops Center (SOC): `soc@vanguard-sys.com` | Ext. 9911
Hardware & Logistics: `asset-mgmt@vanguard-sys.com` | Ext. 4420
